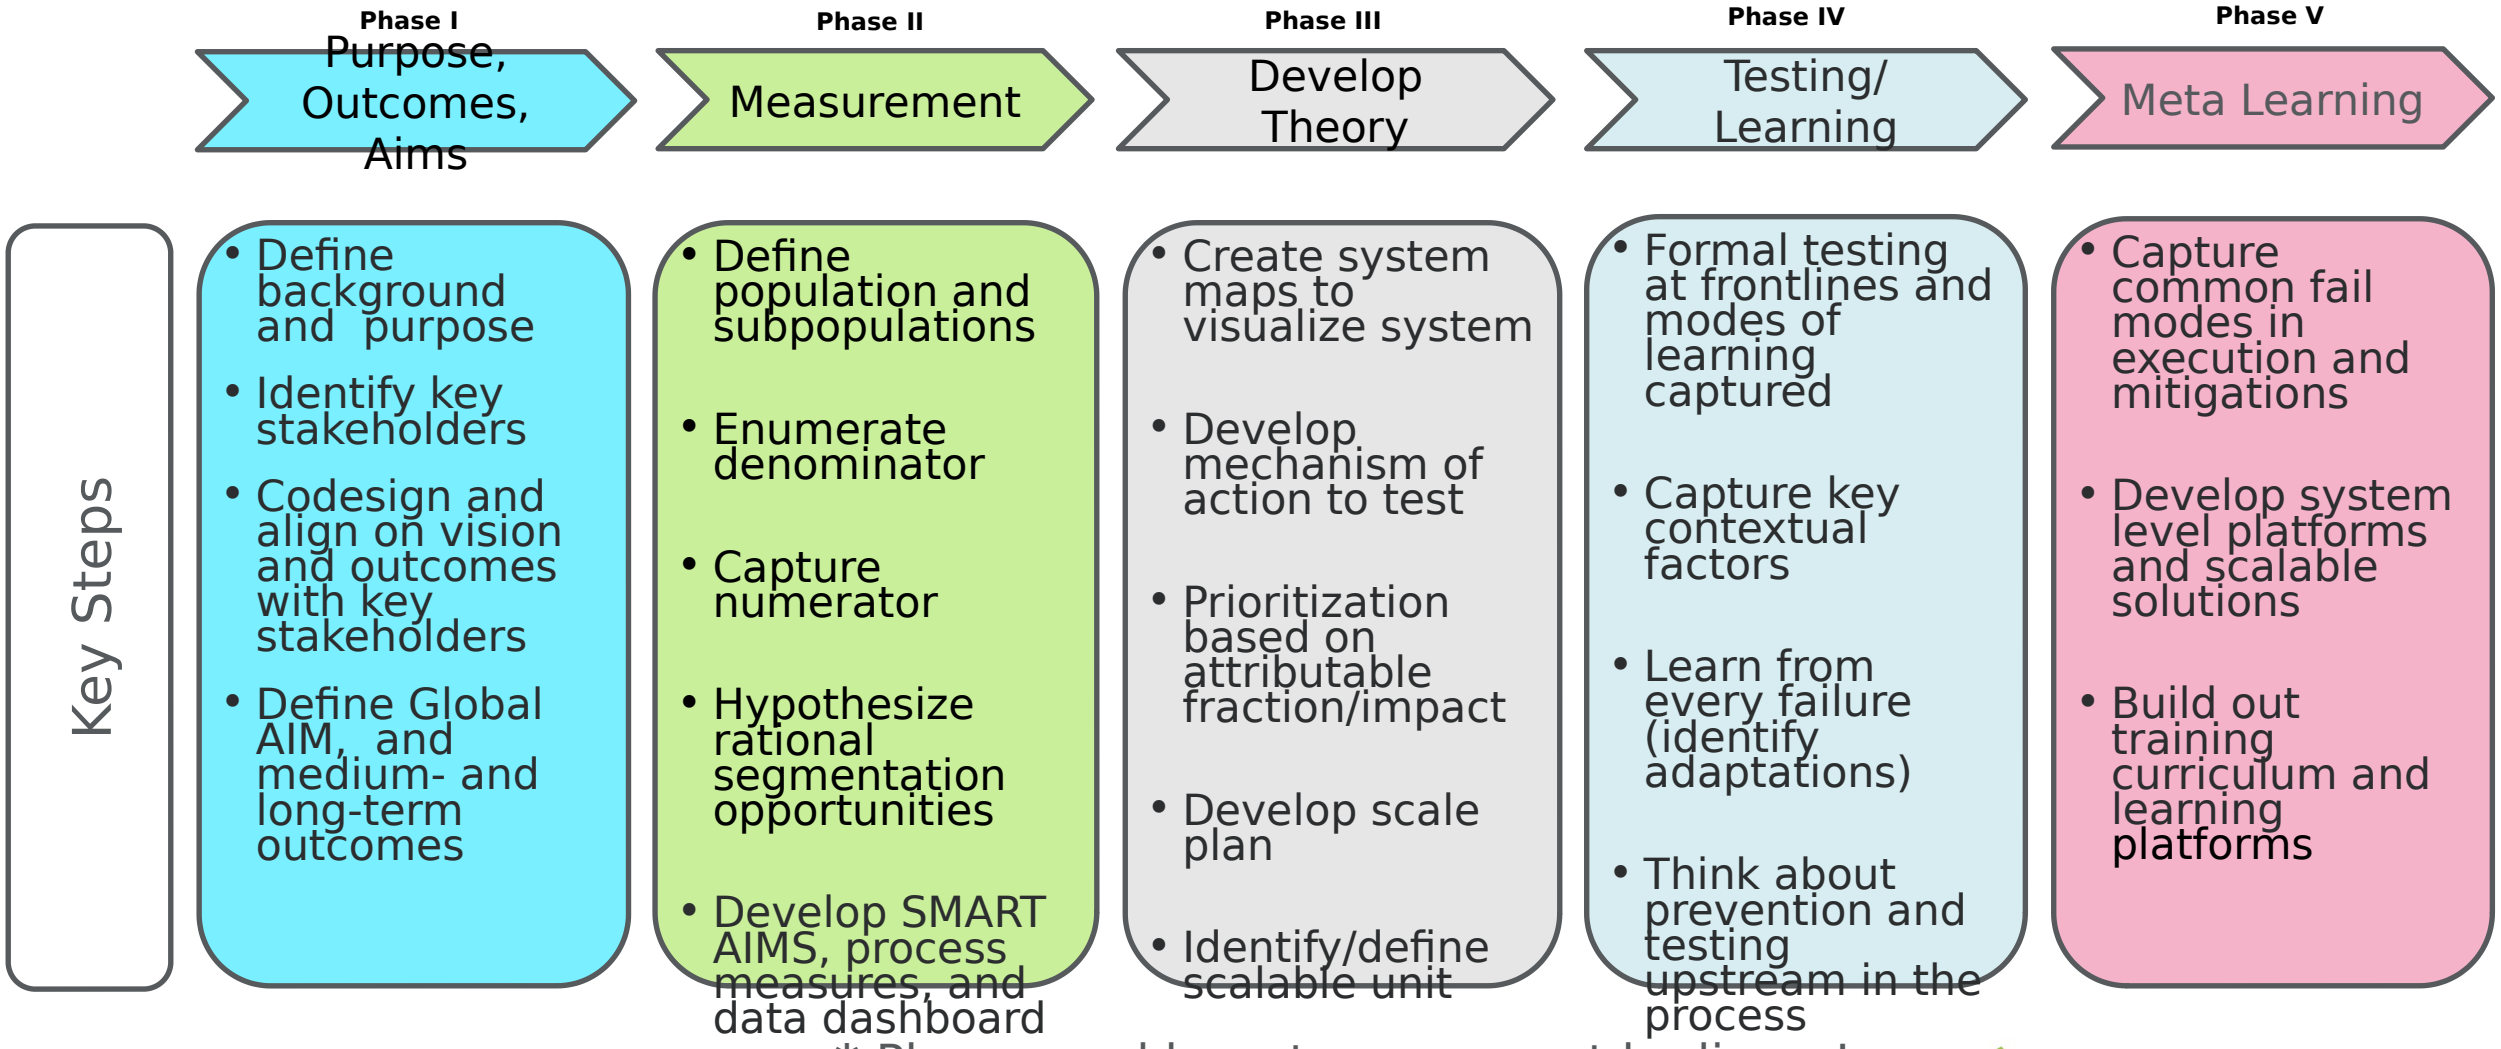
Population Improvement Roadmap



Phase I
Purpose, Outcomes, Aims
Phase II
Measurement
Phase III
Develop Theory
Phase IV
Testing/ Learning
Phase V
Meta Learning
Key Steps
• Define background and purpose
• Identify key stakeholders
• Codesign and align on vision and outcomes with key stakeholders
• Define Global AIM, and medium- and long-term outcomes
• Define population and subpopulations
• Enumerate denominator
• Capture numerator
• Hypothesize rational segmentation opportunities
• Develop SMART AIMS, process measures, and data dashboard
• Create system maps to visualize system
• Develop mechanism of action to test
• Prioritization based on attributable fraction/impact
• Develop scale plan
• Identify/define scalable unit
• Formal testing at frontlines and modes of learning captured
• Capture key contextual factors
• Learn from every failure (identify adaptations)
• Think about prevention and testing upstream in the process
• Capture common fail modes in execution and mitigations
• Develop system level platforms and scalable solutions
• Build out training curriculum and learning platforms

* Phases and key steps may not be linear!
